Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of group I, claims 31-53 in the reply filed on 11/29/04 is acknowledged. The traversal is on the ground(s) that the search should not be a serious burden. This is not found persuasive because the claimed cast article can be made by a different method, in which classified in a different class.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 31-53 are rejected under 35 U.S.C. 102(b) as being anticipated by Bergsma (US 5,968,292).

Bergsma discloses a method for semi-solid casting comprising the steps of providing a first alloy, including an aluminum-silicon hypoeutectic alloy and a providing a second alloy,

including a grain refiner, a reactive metal, boron. Both of the metals are liquefied by heating to a first temperature. The metals are generated to a semi-solid state by cooling the combination to a second temperature, wherein the semi-solid metal includes a multitude of aluminum particles having a particle size and a particle number. The particle size is minimized or maximized by reducing the elapse (col. 5, lines 1-21, col. 7, lines 30-45). The aluminum particle is less than about 70 microns, and having an average from about 40 to 60 microns (col. 7, lines 61-64). Both the first and second alloys are heated greater than 617 degrees C (col. 15, lines 55-60). The first alloy comprises about 6 to 8% silicon (col. 4 line 60 and col. 5, line 59). The second alloy comprises about 1 to 10% titanium (col. 7, line 15).
